Please note: The classroom examples in this book are illustrative composites created to show how the ideas can work in practice. They are not case studies of specific individuals. AI tools, features, and school policies change often, so always check your school or district's current rules before using any tool with students or student information. This book offers general educational guidance and is not legal or professional advice.

Contents

Introduction: The Sunday Night Problem

Chapter 1: Why Teachers Lose Hours (and Where AI Helps)

Chapter 2: The 5-Part Prompt Formula

Chapter 3: Lesson Planning in Minutes

Chapter 4: Differentiation and Accessibility

Chapter 5: Assessments and Rubrics

Chapter 6: Grading Feedback Without the Burnout

Chapter 7: Communication and Admin Tasks

Chapter 8: Student-Facing AI: Activities and Guardrails

Chapter 9: Ethics, Privacy, and Accuracy

Chapter 10: Build Your Personal Prompt Library

Chapter 11: The 30-Day Implementation Plan

Bonus 1: 50 Copy-and-Paste Prompts

Bonus 2: Prompt Formula Cheat Sheet

Bonus 3: Parent Letter on Classroom AI Use

Your Next Step

About the Author

Introduction: The Sunday Night Problem

It's 9:40 on a Sunday night. You finally sat down to relax, and then it hits you: thirty-two essays still ungraded, a quiz that doesn't exist yet, and three parent emails you've been putting off since Thursday.

You love teaching. You became a teacher for the moment a student's face changes because they finally understand. So why does the job so often feel like it's mostly everything else?

If that sounds familiar, you're not imagining it, and you're not bad at time management. Planning, grading, emails, and paperwork quietly eat the hours that should belong to your students, your family, and your own rest. Over weeks and months, that cost turns into exhaustion.

Maybe you've heard that AI can help. Maybe you even tried it once. You typed a vague request, got a vague answer, a stiff email or a generic quiz, and decided it wasn't for you.

Here's the truth: the problem wasn't AI. It was the prompt.

That's what this book is for. It's a practical, step-by-step system built for busy teachers, with no technical background required. In the chapters ahead, you will learn how to:

- Write prompts that work the first time, using a simple 5-part formula
- Draft lessons, quizzes, rubrics, feedback, and parent emails in minutes instead of hours
- Adapt materials for English learners, IEP and 504 needs, and advanced students
- Protect student privacy and catch AI mistakes before they reach your class
- Build a personal prompt library and a 30-day plan that turns all of this into a habit

Many teachers who build these habits aim to win back five or more hours a week. Your results will depend on your routine, but the goal is the same for everyone: to give you your evenings back and let you spend your best energy where it matters most.

How to use this book. Each chapter solves one step of the problem and ends with a Quick-Win Box containing a tip, a real-life example, and a quick action step. Don't just read. Do the action step before you move on. At the back, you'll find 50 ready-to-use prompts, a formula cheat sheet, and a parent letter.

Your first win starts now. Take tomorrow's lesson and try the prompt below. It takes about ten minutes, and then we'll look at where your time actually goes.

QUICK-START BOX

Tip: Pick a lesson you already know well, so you can judge the AI's output quickly.

Real-Life Example: A first-year teacher tried one prompt on her next-day vocabulary lesson and got a usable warm-up in under two minutes.

Quick Action Step: Open any AI tool and paste: "Write a 5-minute warm-up for [grade] [subject] on [topic]." Use what works and edit the rest.

Chapter 1: Why Teachers Lose Hours (and Where AI Helps)

Most teachers don't lose time to teaching. They lose it to everything around it: rewriting the same email, building quizzes from scratch, typing the same feedback on the thirtieth essay, and reformatting materials for different learners. These tasks feel small, but they add up to five, ten, even fifteen hours a week, usually in the evening and on weekends.

The good news is that these time drains share a pattern. They are repetitive, text-based, and follow a predictable structure. That is exactly where AI performs best. It can produce a first draft in seconds, leaving you to do what only you can: review, adjust, and add your professional judgment.

AI is not a good fit for everything. Tasks that depend on knowing a student personally, such as a sensitive conversation or a final grading decision, stay with you. The goal is to hand off the drafting, never the deciding.

QUICK-WIN BOX

Tip: Start with tasks that are repetitive and text-based. If you've written something similar more than three times, AI can likely draft it for you.

Real-Life Example: A 7th-grade science teacher tracked her week and found she spent about four hours on parent emails and quiz writing. She began asking AI for first drafts of both, then edited them in her own voice. Within two weeks, those four hours dropped to under two, and she used the time to give students more feedback during class.

Quick Action Step: Tonight, write down every task you did this week outside of teaching time. Circle the three that took the longest, then underline the one that is mostly writing. That underlined task is your first AI experiment. Tomorrow, give it one prompt and compare the result with how you'd normally do it.

Enjoying the sample?

The full book continues with Chapters 2 to 11, including the 5-Part Prompt Formula, lesson plans, quizzes, rubrics and parent emails, plus 50 ready-to-use prompts, a formula cheat sheet and a parent letter.

The full book is launching soon.
